

open the forum, nice interface, items with pictures, also can see profile

2. most recent posts, not sure whether sellers may not post a photo

3. search some books, search target(confusing)

4. module code is default searching target (not showed)

5. user may not want to tick, think it is redundant

6. dont know what is scope, user thinks it is good

7. smart sorting, calculating based on price and condition

8. wish list, can put books user want to buy, will be archived

9. want to buy something

10. page full of information will be shown

11. not so important things are in small font

12. user want to sell

13. attachment session, can upload photos from either computer or smartphone, quite convenient

14. user don't think upload picture should be on the top

15. have suggested condition, may get more data for the condition

16. contact, can include handphone, email and others

17. price, original price, available until (can renew)

18. information quite a lot for user to fill in, good, but if user is in hurry he may not want to fill in so many info

19. wanna buy session

20. want to get average price, search module code and select current scope

21. another way to display the result
